

Greater Rio Grande Watershed Alliance Treated Projects 2011-2021

GRGWA Project Statistics

Project statistics and map reflect projects begun in 2011-2021 and completed by December 2024, according to records provided by the GRGWA to NMFWRI

Completed project acreage: >4500 ac

Completed projects: 116

SWCDs with treatments: 12 (Claunch-Pinto, Coronado, Ciudad, East Rio Arriba, Edgewood, Lava, McKinley, Santa Fe-Pojoaque, Socorro, Taos, Upper Chama, Valencia)

Tribes: Santo Domingo, Sandia, Acoma

Number of restoration contractors employed: 20 (including 3 Tribal contractors)

Land ownership of all projects (includes proposed + completed):

50% private, 30% Tribal, 13% state, 3% municipal, 2% land grant, 2% county

Ownership	# of Projects
Private	86
Tribal	52
State	23
Municipal	5
Land grant	3
County	3

NMFWRI Monitoring Statistics

These statistics reflect monitoring work conducted by NMFWRI both pre-and post-treatment between 2011 to December, 2024.

Pre-treatment monitoring data: 70+ projects

5-year-post-treatment monitoring data: 60 projects

10-year-post-treatment monitoring data: 15 projects

Monitoring photo waypoints set up for repeat use: 259+

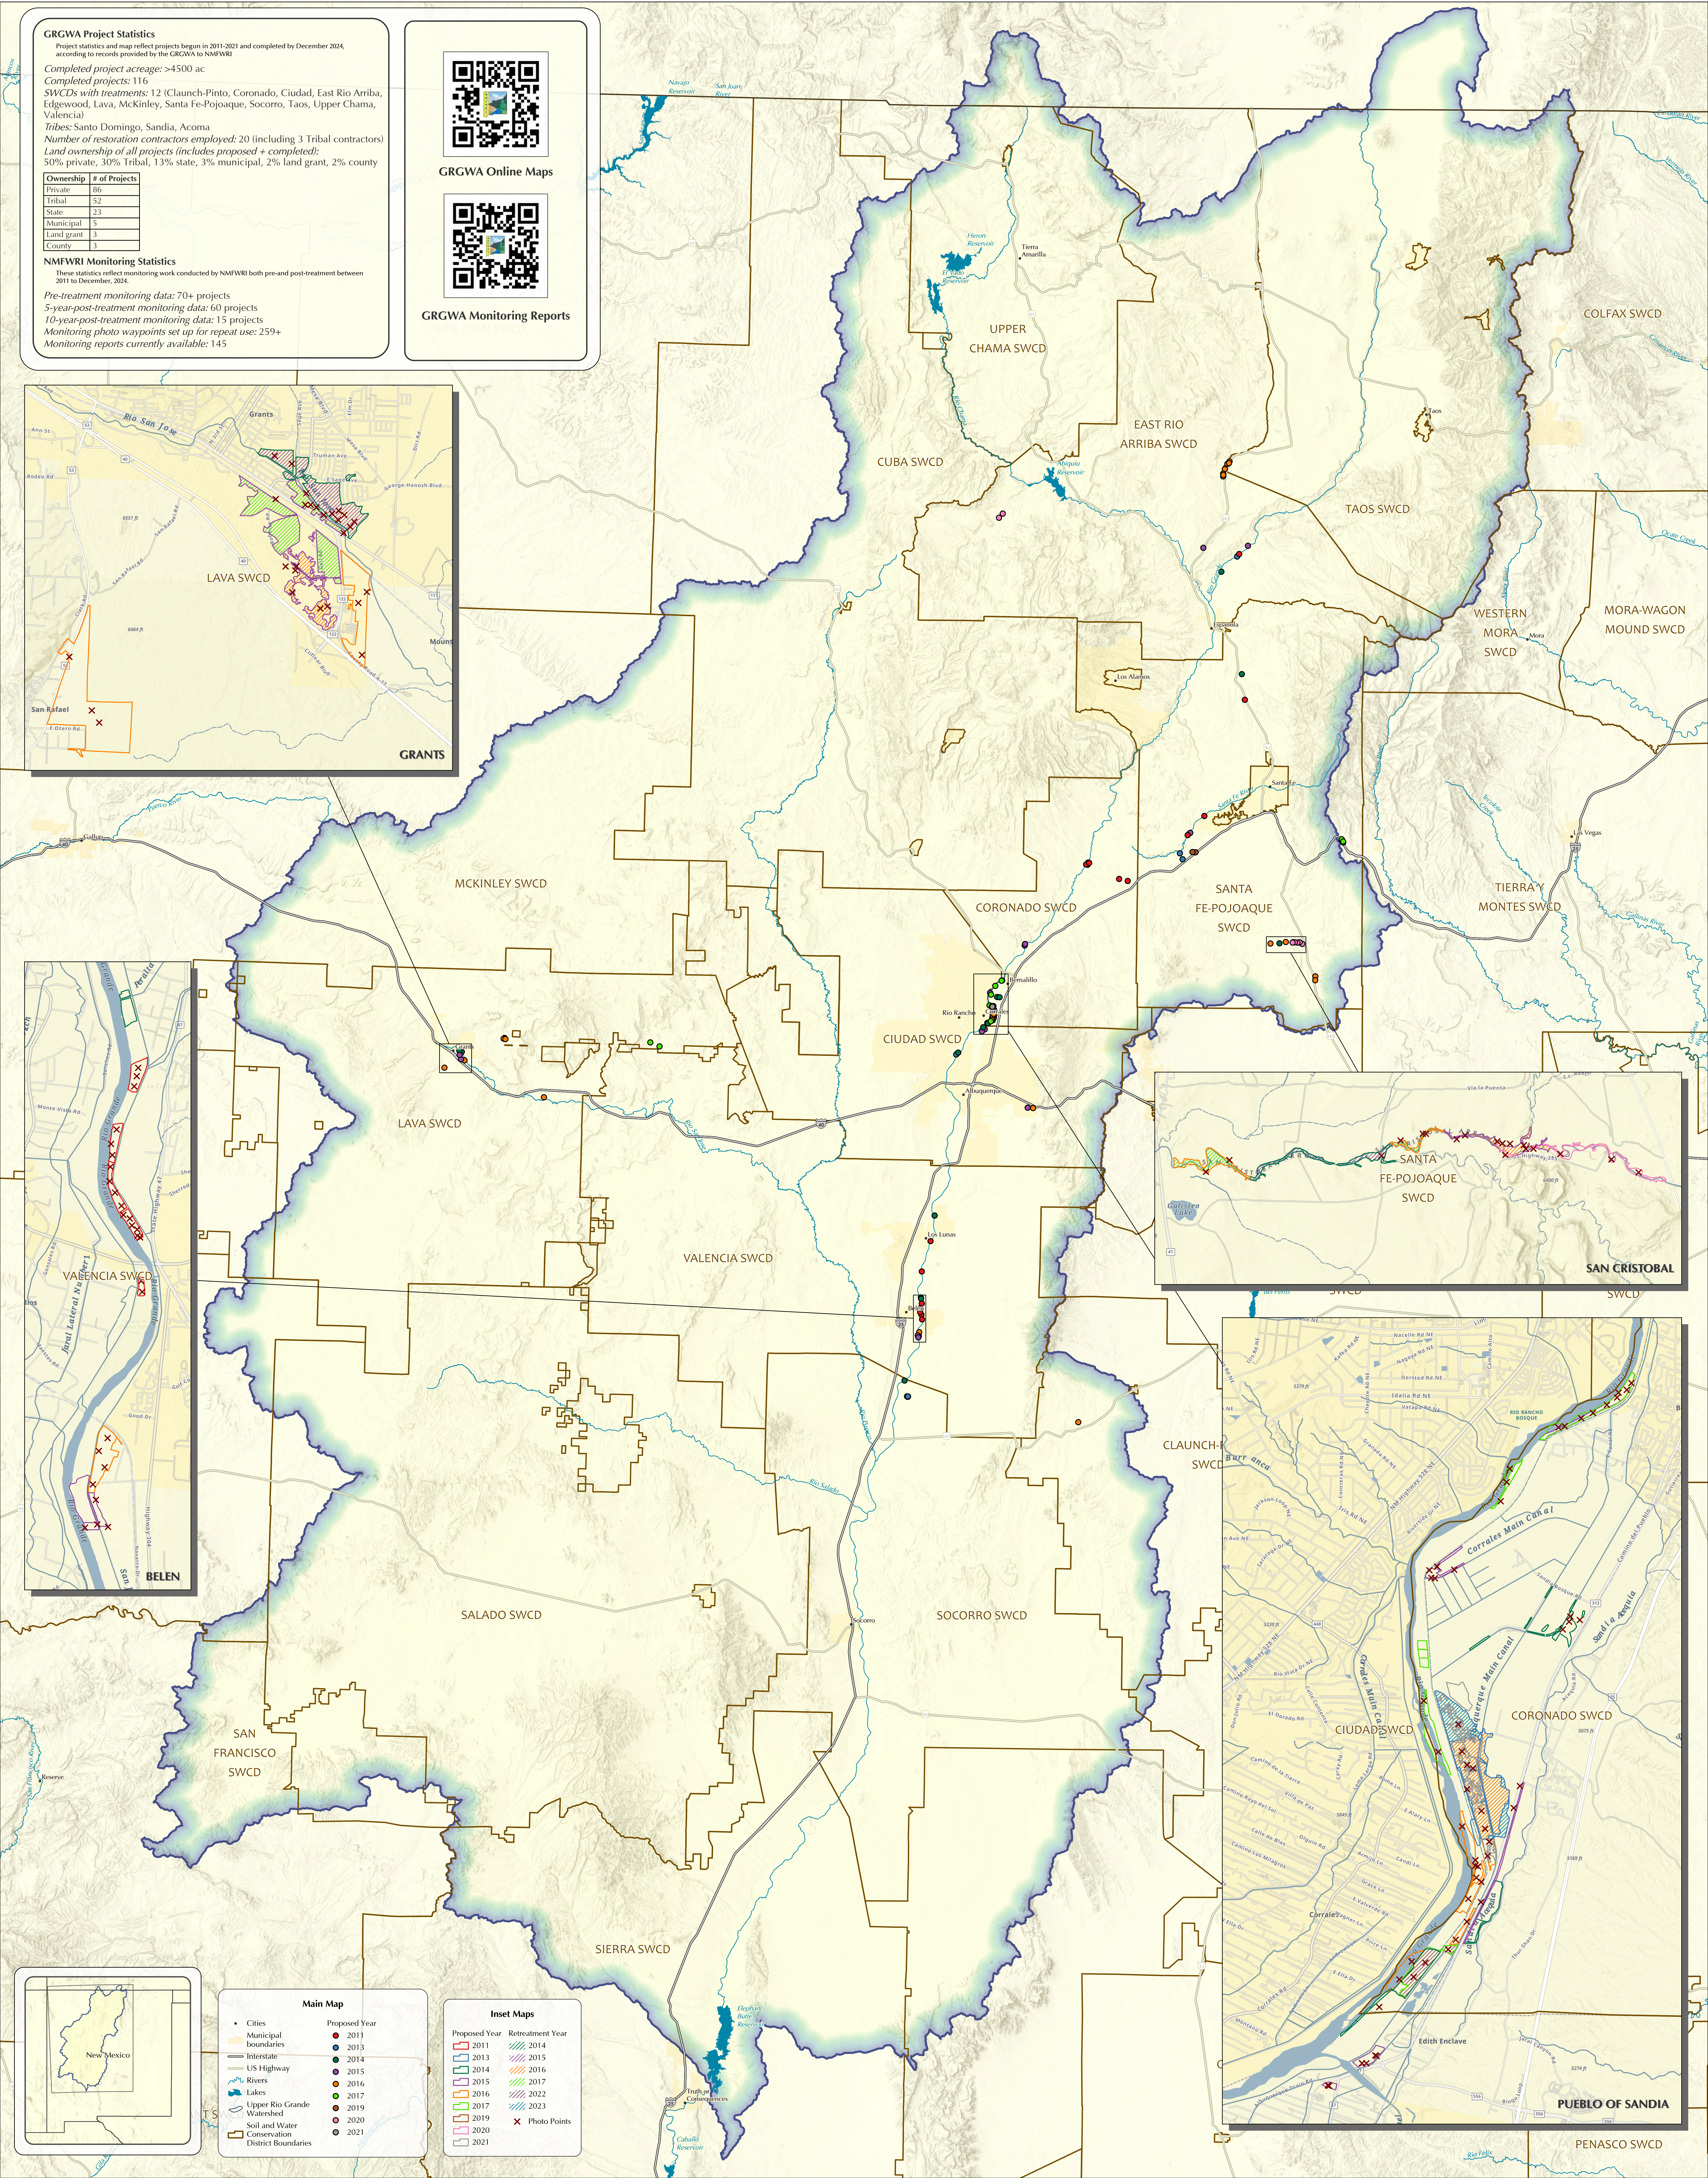

Monitoring reports currently available: 145

GRGWA Monitoring Reports

The Greater Rio Grande Watershed Alliance (GRGWA) is a collaboration of soil and water conservation districts (SWCDs), Pueblos, agencies, and stakeholders along the Middle Rio Grande Watershed working on landscape-scale watershed restoration, with a focus on non-native preatophyte removal from the bosque. They use a variety of techniques including extraction, mastication, aerial, basal, foliar, and cut-stump herbicide applications, and planting grass, shrubs, and trees. They follow community, statewide, and national management and conservation plans, and also seek to monitor the effectiveness of their restoration efforts.
